Cloud & Platform

AWS GCP GKE Cloud Run ECS
Serverless Cloud Foundations

Infrastructure & DevOps

Terraform Docker Kubernetes Helm
Jenkins Harness AWS CodePipeline
AWS CodeBuild GitHub Actions
CI/CD

Programming & Scripting

Python Bash C/C++ SQL Git
REST APIs

Networking & Security

VPC IAM Microsoft Entra ID SSO
WIF Firewall Rules Org Policies

Observability & Operations

Monitoring Logging Tracing
Telemetry Infra Automation
System Debugging

AI & Agentic

Vertex AI Google ADK Gemini
Agentic AI

Certifications

Advanced SQL

HackerRank

MongoDB University

MongoDB

Foundations of Modern ML

IHub @ IITH

Experience

The Hartford Insurance Group

Associate Software Engineer – Platform Engineering

May 2026 – Present

Hyderabad, IND

- Work on **cloud platform engineering** across AWS and GCP, supporting infrastructure provisioning, application onboarding, observability, deployment automation, and secure cloud integrations.
- Develop and maintain **Terraform-based infrastructure** for persistent and non-persistent application environments, enabling repeatable provisioning and consistent platform configurations.
- Implement application **observability** across monitoring, logging, tracing, and telemetry for newly onboarded workloads, improving operational visibility and troubleshooting.
- Support application deployment and release workflows using **Jenkins, Harness, AWS CodePipeline, and AWS CodeBuild**, working with automated build and deployment processes across environments.
- Work with **AWS serverless services** and foundational cloud infrastructure, while supporting secure cross-cloud connectivity between AWS and GCP using Workload Identity Federation (WIF).
- Configure enterprise identity integrations using **Microsoft Entra ID and SSO**, and contribute to GCP platform workflows involving Vertex AI, Google ADK, and agentic AI applications.

Cloudwerx Worldwide Private Limited

Cloud / Platform Engineering (Storypeach Technologies – EOR: Mar 2026 – Apr 2026)

Apr 2025 – Apr 2026

Hyderabad, IND

- Worked on Platform & Security engineering, focusing essentially on cloud infrastructure deployment with key focuses on workload & governance layers.
- Implemented secure **GCP Cloud Foundations** using Terraform, covering project hierarchy, IAM, VPC networking, organization policies, governance controls, and baseline security configurations.
- Provisioned and supported cloud infrastructure for **AWS-to-GCP migration** initiatives, validating networking, compute, database, and application environments across both cloud platforms.
- Deployed and managed **Kubernetes workloads on GKE** using Docker and Helm, configuring application networking and GCP Ingress for externally accessible services.
- Worked with **GCP networking and security** including VPCs, IAM, firewall rules, service connectivity, access controls, and cloud resource configurations across application environments.
- Implemented CI/CD automation using **GitHub Actions** and contributed to internal cloud asset visibility and dependency-mapping tooling for platform operations and migration activities.

Oppo India R&D Centre

Internship Trainee

May 2024 – Oct 2024

Hyderabad, IND

- Worked in a **Linux-based engineering environment**, supporting software and firmware validation, debugging, and release workflows across 18+ Android device models.
- Developed **Python and Shell automation scripts** to streamline regression testing, log analysis, and repetitive bring-up workflows, reducing manual validation effort.
- Worked with **GitHub Actions and Jenkins** to support automated build, test, and validation workflows, gaining hands-on exposure to CI/CD practices and engineering automation.
- Gained hands-on exposure to **AWS fundamentals and AWS CodePipeline**, supporting cloud-based CI/CD workflows and understanding automated software delivery across development environments.
- Debugged and resolved 90+ system and kernel-level issues using **Linux logs, driver events, shell tools, and system tracing**, strengthening troubleshooting and production-oriented debugging skills.

VJ-Hub, VNRVJIT

Tech Enablement / Web Development & BDE Intern

Feb 2024 – Apr 2024

Hyderabad, IND

- Supported web development and technical enablement initiatives while contributing to business development and stakeholder outreach.

Projects

Cloud-Native 3-Tier Application on GCP

Flask, Docker, GKE, Cloud SQL, Terraform, Helm

- Designed and deployed a **cloud-native 3-tier application on GKE** using Terraform for infrastructure provisioning and Helm for Kubernetes application deployment.
- Implemented automated build and deployment workflows using **GitHub Actions**, enabling consistent container image builds and application updates.

Context-Aware Image Retrieval System

Python, BLIP, SBERT, GCP, Gradio

- Built a multi-modal image retrieval system combining BLIP-based captioning with TF-IDF, Levenshtein distance, and SBERT embeddings for hybrid semantic search.
- Deployed the application on GCP with a Gradio-based interface, focusing on low-latency inference and scalable request handling.

Education

VNR Vignana Jyothi Institute of Engineering & Technology

Bachelor of Technology in Computer Science

Hyderabad, IND

GPA: 8.48/10
